CRAFT for Delta Installation

Supported software versions:

      Delta V5.3.1

      CRAFT for Delta V1.1

      VirtualBox 5.2.18

System Requirements

      Windows 7 64-bit or higher

      MacOS, still in testing, release TBD.

      Virtual Machine support enabled; this may be a BIOS setting

Remove previous versions of Craft for Delta

      If you have installed a previous version of CRAFT for Delta:

1.) Start VirtualBox
2.) Right click on the openvj4delta virtual machine
3.) Select Remove
4.) Click Delete all files
5.) Close VirtualBox

CRAFT for Delta Installation Steps:

1.) Install Delta. Version 5.3.1 or newer.

      Download from https://nmrsupport.jeol.com/Software

2.) Install VirtualBox. Version 5.2.18 (preferred and currently tested version).

      Download from https://www.virtualbox.org

      Newer versions have not been tested and may have problems.

3.) Download the CRAFT_4_Delta_1.1 zip file from:

      https://debussy.jeol.com:5001/sharing/GIqgjwanq

      The password is CRAFT_4_Delta_2019

4.) Extract the zip file.
5.) Navigate to the directory with the CRAFT_4_Delta files.
6.) Right click on configImportCRAFT4Delta script and select run as administrator.

The virtual machine may be run like a Linux computer by a user (perfectly OK to do), however do not allow Virtual Box to update to a newer version of VirtualBox or to install the VirtualBox additions.

Happy CRAFTing!

For **HELP** please post messages to the NMR support web site Craft for Delta forum:

      https://nmrsupport.jeol.com/Forums/aff/11

If a Windows 10 feature build update disables communication between Delta and the VirtualBox virtual machine: From the original CRAFT_4_Delta download find and right click on the configCRAFT4Delta script and run as administrator. This should reset the Windows to VirtualBox communications.
