Deconvolution Function

NMR data processing software

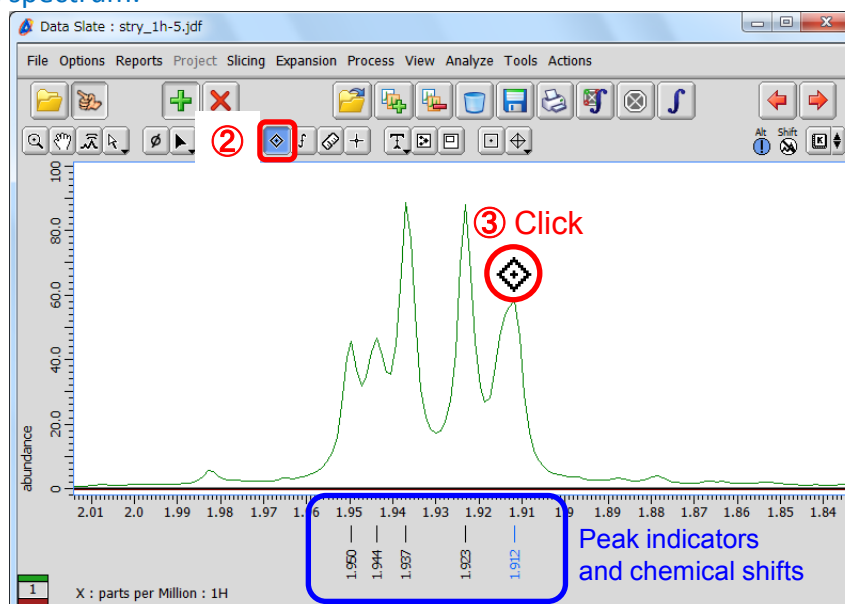

Delta
NMR Software
v5.0

In Delta software, it is possible to deconvolve overlapping peaks with Lorentzian, Gaussian and a combination of Lorentzian and Gaussian functions.

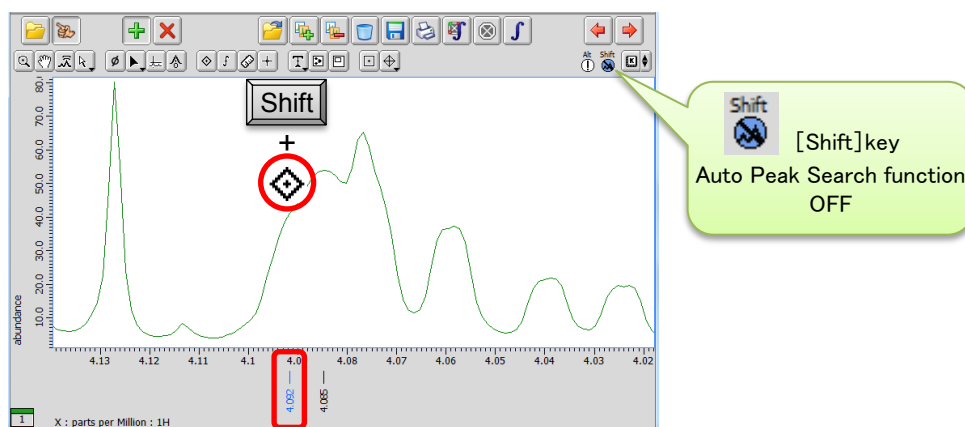

- ① Display a spectrum in the **1D Processor** or **Data Slate** window.
- ② Click the **Peak** button  to activate the peak picking mode.
- ③ Pick peaks in the spectrum with the cursor indicated by the **Peak symbol** .

Peak indicators (marks) and chemical shifts of the selected peaks have been displayed below the spectrum.

Peak Picking

- ★ If you need to pick up some shoulder or broad overlapping peaks manually, push and hold the **Shift** key and create the peak.

Selected a shoulder peak (create peak anywhere)

- ④ Push and hold the  button to display the pull-down menu.

- ④ Click

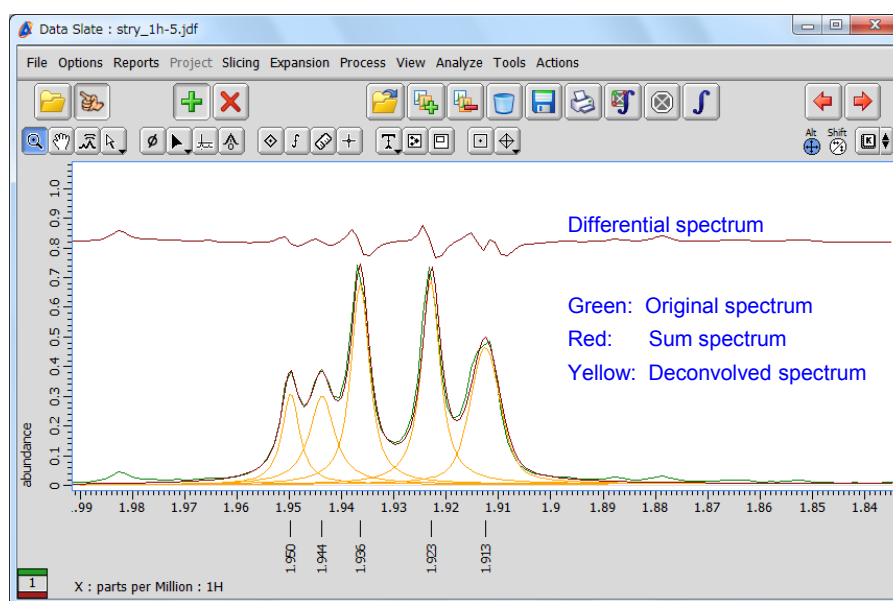

- ⑤ Select a curve fitting function for deconvolution from the menu.

Deconvolution has been executed and the fitting result has been shown on the data.

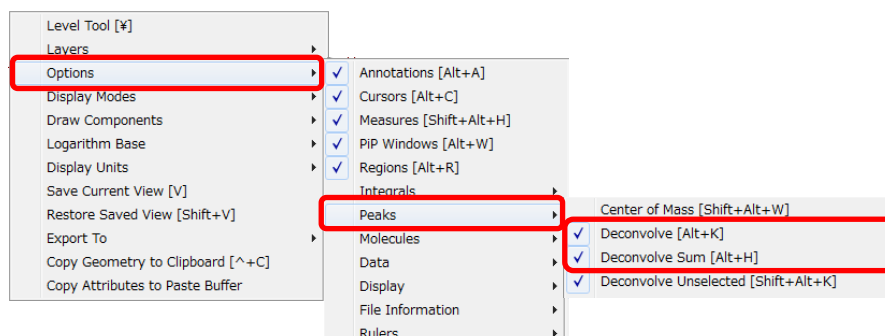

- ★ **Fit Mixed** is the Voigt fitting function which is a combination of Lorentzian and Gaussian functions.

- ★ The shortcut key is shown for each fitting function on the right.

Deconvolution of overlapping peaks

- ★ It is possible to display or hide the deconvolution result from the context menu as follows: Push and hold the right mouse button to display the menu. Then select **Options – Peaks – Deconvolve** and **Deconvolve Sum** as shown below.

⑥ Select **Analyze — Peak Spreadsheet** to open the **Spread Sheet** window.

The detailed results for all deconvolved peaks have been summarized in the **Spread Sheet** table.

Spread Sheet

X [ppm]	X Fold	Class	Normal	Integral	Intensity	Slope [abn/ppm]	Offset	G/L Mix	Protons	Molarity [mmol/L]	X Diam/J [ppm]
1.950	0	MD	0.417	1.488	0.308	-33.234m	3.586m	40.912m	1	0.417	3.997m
1.944	0	MD	0.587	2.097	0.298	-33.234m	3.786m	15.911u	1	0.587	5.729m
1.936	0	MD	0.954	3.407	0.678	-33.234m	4.027m	0.138	1	0.954	4.332m
1.923	0	MD	1.000	3.570	0.689	-33.234m	4.479m	75.210m	1	1.000	4.339m
1.913	0	MD	0.948	3.383	0.461	-33.234m	4.823m	0.594	1	0.948	7.665m

★ The **Spread Sheet** table

Class	MD				
	Deconvolution				
	Peak Picking (A: Automatic, M: Manual)				
X	Peak position	Integral	Integral value	Intensity	Peak intensity
G/L Mix	Gauss/Lorentz ratio	X Diam/J	Peak half width		

★ The result of deconvolution

The Chi square value and the standard deviation value are shown in the **Delta Console** window.

★ Recalculation

It is possible to set and fix the value of **X** (peak position), **Intensity** (peak intensity) and **X Diam/J** (peak half width) in a deconvolution result in the **Spread Sheet** window and execute deconvolution again.

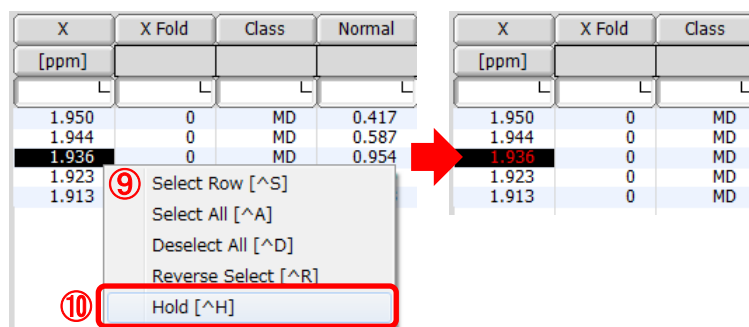

⑦ Select a cell in the **Spread Sheet** window.

⑧ Input a value into the **Edit Cell** box.

⑨ Push and hold the right-mouse-button over the cell to display the context menu.

⑩ Select **Hold** from the menu. The chemical shift value in the cell has turned red.

⑪ Select a curve fitting function from the  menu.

The recalculated result has been shown on the data.
